Request for Proposal: Enterprise EMR and Clinical Workflow Platform

Meridian Care Hospitals | RFP No. MCH-EMR-2026-01 | Issued 01 August 2026

1. Background

Meridian Care Hospitals (MCH) is a fictional network of four multi-specialty hospitals with 1,200 inpatient beds and about 3,500 clinical and administrative users. Patient records are currently split between a legacy hospital information system, departmental spreadsheets and paper charts. MCH intends to adopt a single Electronic Medical Record (EMR) and clinical workflow platform across all four sites.

2. Scope of work

- Core EMR: patient registration, longitudinal record, clinical notes, problem list, allergies, orders and results.
- Computerised physician order entry (CPOE), e-prescribing and drug-interaction / allergy checking.
- Interfaces to the Laboratory Information System, Radiology/PACS and pharmacy using HL7 v2 and FHIR R4; DICOM for imaging.
- Integration with the national digital health ecosystem (ABHA / ABDM) for patient identity and record exchange.
- Patient portal and mobile app for appointments, reports and consent management.
- Migration of the last 5 years of patient demographics and clinical history from the legacy system.
- Training for about 3,500 users and post go-live hypercare.

3. Mandatory requirements

- Target go-live at all four hospitals within 9 months of contract signature (up to 12 months acceptable with justification).
- Platform availability of at least 99.9% with defined disaster-recovery objectives (RPO and RTO to be stated).
- Patient data hosted in India; encryption in transit and at rest; role-based access with a complete audit trail.
- Compliance with the Digital Personal Data Protection Act, 2023; information-security certification (e.g. ISO 27001) preferred.
- 24x7 support for critical incidents with stated response and resolution times.
- A fixed-price commercial proposal covering a 5-year total cost of ownership with all assumptions listed.

4. Required structure of the response

Responses must be 2 to 4 pages and cover: executive summary; proposed solution and implementation approach; timeline, team and milestones; price table with assumptions; security, compliance and risk controls; support model, relevant experience and references. Statements that are not backed by evidence (numbers, certificates, named references) will be scored conservatively.

5. Evaluation criteria

Criterion	Weight	What will be assessed
Technical Capability	30%	Architecture, interoperability (HL7/FHIR/DICOM/ABDM), scalability, clinical fit
Implementation Plan	20%	Timeline, milestones, staffing, training, data migration, risk plan
Commercial Value	20%	Pricing clarity, 5-year total cost, assumptions and exclusions
Security & Compliance	20%	Controls, certifications, privacy, auditability, data residency
Support & Experience	10%	Support model and SLAs, similar projects, references

6. Key dates

RFP issued: 01 August 2026. Questions closed: 25 August 2026. Proposal submission deadline: 15 September 2026. Contact for clarifications: procurement@meridiancare.example (fictional).
