Apex Health Systems - Proposal

Response to RFP MCH-EMR-2026-01 | Submitted 12 September 2026 | Contact: bids@apexhealth.example

1. Executive summary

Apex Health Systems Pvt. Ltd. (Pune) proposes the Apex CareCore platform, a cloud-native, FHIR-native EMR designed for multi-hospital groups. We understand that MCH needs one longitudinal patient record across four hospitals, dependable integration with laboratory, imaging and pharmacy systems, and a defensible security posture under the DPDP Act. Our proposal prioritises technical robustness and compliance over lowest price.

2. Proposed solution and approach

CareCore stores clinical data natively as FHIR R4 resources in a clinical data repository, so that exchange with ABDM and other FHIR systems requires no translation layer. An event-driven integration layer (message broker with HL7 v2.5 adapters and DICOMweb gateway) connects the LIS, RIS/PACS and pharmacy systems. CareCore is ABDM-certified for the HIP and HIU roles.

- Microservices architecture, horizontally scalable; a March 2026 load test sustained 9,200 concurrent sessions with p95 response under 1.4 seconds.
- Active-active deployment across two availability zones; RPO 5 minutes, RTO 30 minutes; 99.95% monthly availability commitment.
- Clinical decision support engine with drug-drug, drug-allergy and dose-range checking, configurable by the MCH pharmacy committee.
- Open APIs (FHIR REST, SMART on FHIR) so MCH can add third-party apps without vendor lock-in.

3. Timeline, team and milestones

We propose an 11-month programme with a pilot at one hospital before wave rollout. The programme team has 28 full-time equivalents at peak, led by a Programme Director and a Clinical Informatics Lead.

Phase	Period	Milestone / deliverable
Mobilise and design	Month 1-2	Signed-off functional design, interface catalogue, migration plan
Build and integrate	Month 2-6	Configured platform, all interfaces tested in staging
Pilot hospital go-live	Month 7	Hospital 1 live; pilot exit review
Rollout waves	Month 8-10	Hospitals 2, 3 and 4 live in sequence
Stabilise and handover	Month 11	Hypercare closure, handover to support

Top delivery risks are interface readiness at the legacy LIS, clinician availability for design workshops, and data quality in migrated records. Each is tracked in a risk log reviewed fortnightly with the MCH steering committee. Note that our 11-month schedule is longer than the 9-month target; the extra time buys a pilot-first rollout.

4. Price

Cost component	INR lakh	Basis
Platform subscription (5 years)	620	Per-bed tiered licence, 1,200 beds, includes patient portal
Implementation and configuration	310	Fixed price, 11-month programme
Data migration (5 years history)	140	Includes three full migration rehearsals
Interfaces (LIS, PACS, pharmacy, ABDM)	190	Up to 15 interfaces; additional at INR 5 lakh each
Training and change management	60	3,500 users, train-the-trainer model
Support and maintenance (5 years)	540	24x7 L1-L3 support, includes minor upgrades
Total 5-year cost	**1,860**	**= INR 18.60 crore**

Pricing assumptions

- Prices are in INR lakh, exclusive of GST at the prevailing rate.
- Hosting on a dual-availability-zone Indian cloud region is included in the subscription.
- Price is valid for 120 days from 12 September 2026; annual escalation capped at 4% after year 3.
- Excluded: client-side hardware, network upgrades at hospital sites, third-party licence fees for PACS.

5. Security, compliance and risk controls

- Certifications: ISO/IEC 27001:2022, ISO/IEC 27701 and SOC 2 Type II (report dated January 2026); all held by Apex for the CareCore platform.
- Encryption: TLS 1.3 in transit, AES-256 at rest, field-level encryption for sensitive notes; keys managed in an HSM-backed key vault.
- Access: role- and attribute-based access control, mandatory multi-factor authentication, time-boxed break-glass access with automatic review.
- Auditability: immutable audit log of every read and write, retained for 8 years and exportable to MCH's SIEM.
- Privacy: data residency in India; consent management mapped to DPDP Act obligations; Data Protection Officer appointed; breach notification to the customer within 6 hours.
- Assurance: annual penetration test by a CERT-In empanelled auditor; the latest summary is available under NDA.

6. Support model, experience and references

Support is available 24x7 through three tiers. Priority 1 incidents receive a 15-minute response and a 4-hour resolution target; service credits apply if the 99.95% availability commitment is missed. After the 8-week hypercare period, support is remote; on-site engineers can be added as an option.

Apex has completed 6 hospital EMR deployments in India over the last 5 years, the largest being a 900-bed teaching hospital. References: Lakeview Teaching Hospital (900 beds, live 2024), Sahyadri Heart Institute (350 beds, live 2023), Coastal Medicare Group (3 hospitals, 620 beds, live 2025). Reference contacts will be provided on shortlisting.
